U.S. Customs Service

General Notices

FEES FOR CUSTOMS SERVICES AT USER FEE AIRPORTS

AGENCY: Customs Service, Treasury.

ACTION: General notice.

SUMMARY: This document advises the public of an increase in the fees charged by Customs to user fee airports for providing Customs services at these designated facilities. The fees are based on the actual costs incurred by Customs in purchasing equipment and providing training and one Customs inspector on a full-time basis, and, thus, merely represent reimbursement to Customs for services rendered. The fees to be increased are the initial fee charged for a user fee airport's first year after it signs a Memorandum of Agreement with Customs to become a user fee airport, and the annual fee subsequently charged user fee airports.

EFFECTIVE DATE: The new fees will be effective October 1, 2001, and will be reflected in quarterly, user fee airport billings issued on or after that date.

FOR FURTHER INFORMATION CONTACT: Cynthia Sargent, Budget Division, Office of Finance, (202) 927–0609.

SUPPLEMENTARY INFORMATION:

BACKGROUND

Section 236 of the Trade and Tariff Act of 1984 (Pub.L. 98–573, 98 Stat. 2992) (codified at 19 U.S.C. 58b), as amended, authorizes the Secretary of the Treasury to make Customs services available at certain specified airports and at any other airport, seaport, or other facility designated by the Secretary pursuant to specified criteria, and to charge a fee for providing such services. (The list of user fee airports is found at § 122.15 of the Customs Regulations (19 CFR 122.15).) The fee that is charged is in an amount equal to the expenses incurred by the Secretary in providing Customs services at the designated facility, which includes purchasing equipment and providing training and inspectional services, *i.e.*, the salary and expenses of individuals employed by the Secretary to provide the Customs services, and, thus, merely represents reimbursement to Customs for services rendered. The fees being raised

are the initial fee charged a user fee airport after it signs a Memorandum of Agreement with Customs so that it can begin operations (currently set at $ 117,600), and the annual fee subsequently charged so that user fee airports can continue to offer Customs services at their facilities (currently set at $ 84,500). The notice announcing the current user fee rates was published in the Federal Register on September 13, 2000 (65 FR 55327).

The user fees charged a user fee airport are typically set forth in a Memorandum of Agreement between the user fee facility and Customs. While the amount of these fees are agreed to be at flat rates, they are periodically adjusted, as costs and circumstances change.

ADJUSTMENT OF USER FEE AIRPORT FEES

Customs has determined that, in order for the user fee charged to actually reimburse Customs for expenses incurred in providing requested services, the initial fee must be increased from $ 117,600 to $ 118,000, and the recurring annual fee subsequently charged must be increased from $ 84,500 to $ 88,500. The new fees will be effective October 1, 2001, and will be reflected in quarterly, user fee airport billings issued on or after that date.

Dated: September 17, 2001.

WAYNE HAMILTON,
Assistant Commissioner,
Office of Finance.

[Published in the Federal Register, September 21, 2001 (66 FR 48739)]

DEPARTMENT OF THE TREASURY,
OFFICE OF THE COMMISSIONER OF CUSTOMS,
Washington, DC, September 19, 2001.

The following documents of the United States Customs Service, Office of Regulations and Rulings, have been determined to be of sufficient interest to the public and U.S. Customs Service field offices to merit publication in the CUSTOMS BULLETIN.

DOUGLAS M. BROWNING,
Acting Assistant Commissioner,
Office of Regulations and Rulings.

MODIFICATION OF CUSTOMS RULING AND REVOCATION OF TREATMENT RELATING TO COUNTRY OF ORIGIN MARKING OF CANNED MUSHROOMS

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of modification of a ruling letter and revocation of treatment pertaining to the country of origin marking of canned mushrooms.

SUMMARY: Pursuant to section 625(c)(1), Tariff Act of 1930 (19 U.S.C. 1625(c)(1)), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Implementation Act (Pub. L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs is modifying a ruling pertaining to the country of origin marking of canned mushrooms and revoking any treatment previously accorded by the Customs Service to substantially identical transactions that is contrary to the position set forth in this notice. Notice of the proposed action was published in the CUSTOMS BULLETIN of May 23, 2001, Volume 35, Number 21. No comments were received in response to this notice.

EFFECTIVE DATE: This action is effective for merchandise entered or withdrawn from warehouse for consumption on or after December 3, 2001.

FOR FURTHER INFORMATION CONTACT: Burton L. Schlissel, Special Classification and Marking Branch, (202) 927–1034.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On December 8, 1993, Title VI, (Customs Modernization), of the North American Free Trade Agreement Implementation Act (Pub. L.

103–82, 107 Stat. 2057), (hereinafter "Title VI"), became effective. Title VI amended many sections of the Tariff Act of 1930, as amended, and related laws. Two new concepts which emerge from the law are **"informed compliance"** and **"shared responsibility."** These concepts are premised on the idea that in order to maximize voluntary compliance with Customs laws and regulations, the trade community needs to be clearly and completely informed of its legal obligations. Accordingly, the law imposes a greater obligation on Customs to provide the public with improved information concerning the trade community's responsibilities and rights under the Customs and related laws. In addition, both the trade and Customs share responsibility in carrying out import requirements. For example, under section 484 of the Tariff Act of 1930, as amended, (19 U.S.C. §1484) the importer of record is responsible for using reasonable care to enter, classify and value imported merchandise, and provide any other information necessary to enable Customs to properly assess duties, collect accurate statistics and determine whether any other applicable legal requirement is met.

Pursuant to Customs obligations, a notice of proposed modification of New York Ruling Letter (NY) G86203 dated January 16, 2001, was published in the CUSTOMS BULLETIN of May 23, 2001, Volume 35, Number 21. No comments were received in response to this notice.

Pursuant to section 625(c)(1), Tariff Act of 1930 (19 U.S.C. 1625(c)(1), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Implementation Act (Pub. L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs is modifying a ruling letter pertaining to the country of origin marking of canned mushrooms. Although in this notice Customs is specifically referring to NY G86203 dated January 16, 2001, this notice covers any rulings pertaining to this merchandise which may exist but have not been specifically identified. Customs has undertaken reasonable efforts to search existing databases for rulings in addition to the one identified. Any party who has received an interpretative ruling or decision (*i.e.*, ruling letter, internal advice memorandum or decision or protest review decision) on the merchandise subject to this notice, should have advised Customs during that notice period.

Similarly, pursuant to section 625(c)(2), Tariff Act of 1930 (19 U.S.C. 1625(c)(2)), as amended by section 623 of Title VI, Customs is revoking any treatment previously accorded by Customs to substantially identical transactions. This treatment may, among other reasons, be the result of the importer's reliance on a ruling issued to a third party, Customs personnel applying a ruling of a third party to importations of the same or similar merchandise, or the importer's or Customs previous interpretation of the Harmonized Tariff Schedule of the United States (HTSUS). Any person involved in substantially identical transactions should have advised Customs during that notice period. An importer's failure to advise Customs of substantially identical transactions or of a specific ruling not identified in this notice, may raise issues of reason-

able care on the part of the importer or his agents for importations of merchandise subsequent to this notice.

In NY G86203, Customs considered the country of origin marking of canned mushrooms which were packed on shrink-wrapped skids. In that case, Customs determined that the ultimate purchaser of the mushrooms was the importer's customer in the U.S. who used the mushrooms to produce soups, gravies and other food products. Consequently, pursuant to section 134.35(a), Customs Regulations (19 CFR 134.35(a)), the imported article was excepted from the marking requirements and only the outermost container was required to be marked. Customs also held that the cans, which reach the ultimate purchaser, were the outermost containers and accordingly they were required to be marked with the country of origin. Upon reconsideration, however, we find that the position taken in G86203, *supra*, regarding what constitutes the outermost container, is in error.

In HRL 559976 dated June 30, 1997, steel coils were packed onto skids. In that case, Customs held that the skid was the container of the steel coils and that pursuant to the exception provided under section 134.32(d), Customs Regulations (19 CFR 134.32(d)), marking of the skids would satisfy the country of origin marking requirements provided that the coils reached the ultimate purchaser in the U.S. on the skids. *See* also HRL 561828 dated October 20, 2000 (the outermost container of textile bags excepted from the individual marking requirements is the skid on which the bags are shipped to the ultimate purchaser).

Accordingly, pursuant to 19 U.S.C. 1625(c)(1), Customs is modifying HRL G86203, and any other ruling not specifically identified, to reflect this position, pursuant to the analysis set forth in Headquarters Ruling Letter 562077 (see "Attachment" to this document). Additionally, pursuant to 19 U.S.C. 1625(c)(2), Customs is revoking any treatment previously accorded by Customs to substantially similar transactions.

In accordance with 19 U.S.C. 1625(c), this ruling will become effective sixty (60) days after its publication in the CUSTOMS BULLETIN.

Dated: September 14, 2001.

MYLES HARMON,
(for John Durant,
Commercial Rulings Division.)

Category: Marking

MR. KARL F. KRUEGER
DANZAS AEI CUSTOMS BROKERAGE SERVICES
29200 Northwestern Highway
Southfield, MI 48030

Re: Country of origin marking of canned mushrooms; reconsideration and modification of NY G86203; 134.35; outermost container.

DEAR MR. KRUEGER:

This is in response to your letter dated January 29 and fax of March 21, 2001, on behalf of Kanan Foods, Inc. ("Kanan"), requesting reconsideration of NY Ruling Letter G86203 dated January 16, 2001.

Facts:

Kanan imports canned mushrooms from India for use by their customer, Lipton Foods, Englewood Cliffs, New Jersey. The canned mushrooms are imported on skids and are shrink wrapped in plastic. Lipton will use the canned mushrooms as ingredients in soups, gravies, and similar food products. The manufacturing process utilized by Lipton includes opening the cans by machine and adding the mushrooms to other ingredients. In a letter dated December 20, 2000, Lipton advises that during this process, paper can labels could be dislodged, which would present a potential for product contamination. For this reason, Lipton requires that all canned products be provided without such labeling. Lipton also states that it is aware that the mushrooms supplied by Kanan are a product of India.

NY Ruling Letter G86203

In NY G86203, Customs found that the canned mushrooms undergo a substantial transformation as a result of the processing performed by Lipton in the U.S. and therefore the imported article is excepted from country of origin marking requirements. Customs also held that the cans which reach the ultimate purchaser (Lipton) are the outermost containers and thus are required to be marked with the country of origin. *See* 19 CFR 134.35.

In this request for reconsideration, Kanan contends that the outermost container, which must be marked with the country of origin, is the shrink-wrapped pallet, and that under these circumstances, the mushroom cans are not required to be marked.

Issue:

Whether, for purposes of 19 CFR 134.35, the "outermost container" of the imported good is the shrink-wrapped pallet.

Law And Analysis:

The marking statute, section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304), provides that, unless excepted, every article of foreign origin (or its container) imported into the U.S. shall be marked in a conspicuous place as legibly, indelibly and permanently as the nature of the article (or its container) will permit, in such a manner as to indicate to the ultimate purchaser in the U.S. the English name of the country of origin of the article. Part 134, Customs Regulations (19 CFR Part 134), implements the country of origin marking requirements and exceptions of 19 U.S.C. 1304.

Section 134.1(b), Customs Regulations (19 C.F.R. §134.1(b)), defines "country of origin" as the country of manufacture, production or growth of any article of foreign origin entering the U.S. Further work or material added to an article in another country must effect a substantial transformation in order to render such other country the "country of origin" within the meaning of the marking laws and regulations. The case of *United States v. Gibson-Thomsen Co., Inc.*, 27 CCPA 267, C.A.D. 98 (1940), provides that an article used in manufacture in the U.S. which results in an article having a name, character or use differing from that of the imported constituent article will be considered substantially transformed. In such circumstances the U.S. manufacturer will be considered the ultimate purchaser. The imported article will be excepted from the marking requirements and only the outermost container is required to be marked. *See* 19 CFR §134.35(a).

In HRL 559976 dated June 30, 1997, steel coils were packed onto skids. In that case, Customs held that the skid was the container of the steel coils and that pursuant to the exception provided under section 134.32(d), Customs Regulations (19 CFR 134.32(d)), marking of the skids would satisfy the country of origin marking requirements provided that the coils reached the ultimate purchaser in the U.S. on the skids. *See* also HRL 561828 dated October 20, 2000 (marking the outermost container (skids) satisfies marking requirements where textile bags are excepted from individual marking).

Under the circumstances, it is Customs determination that the shrink-wrapped skid, which reaches the ultimate purchaser (Lipton), unopened is the outermost container.

Holding:

Pursuant to 19 CFR 134.35(a), the outermost container of the imported mushrooms is the shrink-wrapped pallet. Therefore, the marking requirements will be satisfied provided this container is properly marked with India as the country of origin and reaches Lipton in an unopened condition. NY G86203 is modified accordingly. In accordance with 19 U.S.C. 1625(c), this ruling will become effective 60 days after publication in the CUSTOMS BULLETIN.

MYLES HARMON,
(for John Durant, Director,
Commercial Rulings Division.)

PROPOSED REVOCATION OF RULING LETTER AND TREATMENT RELATING TO TARIFF CLASSIFICATION OF MECHANICAL TRANSFER PRESS

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of proposed revocation of ruling letter and treatment relating to tariff classification of mechanical transfer press.

SUMMARY: Pursuant to section 625(c), Tariff Act of 1930 (19 U.S.C. 1625(c)), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs intends to revoke a ruling relating to the classification, under the Harmonized Tariff Schedule of the United States (HTSUS), of mechanical transfer presses, and to revoke any treatment Customs has previously accorded to substantially identical transactions. These are machine tools that utilize one or more dies that perform cutting and forming operations on metal to produce parts, in this case for air bag assemblies. Customs invites comments on the correctness of the proposed action.

DATE: Comments must be received on or before November 2, 2001.

ADDRESS: Written comments are to be addressed to U.S. Customs Service, Office of Regulations and Rulings, Attention: Regulations Branch, 1300 Pennsylvania Avenue, N.W., Washington, D.C. 20229. Submitted comments may be inspected at the same location during regular business hours.

FOR FURTHER INFORMATION CONTACT: James A. Seal, Commercial Rulings Division (202) 927–0760.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On December 8, 1993, Title VI (Customs Modernization), of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), became effective. Title VI amended many sections of the Tariff Act of 1930, as amended, and related laws. Two new concepts which emerge from the law are **informed compliance** and **shared responsibility.** These concepts are based on the premise that in order to maximize voluntary compliance with Customs laws and regulations, the trade community needs to be clearly and completely informed of its legal obligations. Accordingly, the law imposes a greater obligation on Customs to provide the public with improved information concerning the trade community's rights and responsibilities under the Customs and related laws. In addition, both the trade and Customs share responsibility in carrying out import requirements. For example, under section 484, Tariff Act of 1930, as amended (19 U.S.C. 1484), the importer of record is responsible for using reasonable care to enter, classify and declare value on imported merchandise, and to provide other necessary information to enable Customs to properly assess duties, collect accurate statistics and determine whether any other legal requirement is met.

Pursuant to section 625(c)(1), Tariff Act of 1930 (19 U.S.C. 1625(c)(1)), as amended by section 623 of Title VI, this notice advises interested parties that Customs intends to revoke a ruling relating to the tariff classification of mechanical transfer presses. Although in this notice Customs is specifically referring to one ruling, *NY* 857696, this notice covers any rulings on this merchandise which may exist but have not been specifically identified. Customs has undertaken reasonable efforts to search existing data bases for rulings in addition to the one identified. No further rulings have been identified. Any party who has received an interpretative ruling or decision (i.e., ruling letter, internal advice memorandum or decision, or protest review decision) on the merchandise subject to this notice, should advise Customs during this notice period.

Similarly, pursuant to section 625(c)(2), Tariff Act of 1930 (19 U.S.C. 1625(c)(2)), as amended by section 623 of Title VI, Customs intends to revoke any treatment previously accorded by Customs to substantially identical transactions. This treatment may, among other reasons, be the result of the importer's reliance on a ruling issued to a third party, Customs personnel applying a ruling of a third party to importations of the same or similar merchandise, or the importer's or Customs previous interpretation of the HTSUS. Any person involved in substantially identical transactions should advise Customs during this notice period. An importer's failure to advise Customs of substantially identical transactions or of a specific ruling not identified in this notice, may

raise issues of reasonable care on the part of the importer or his agents for importations of merchandise subsequent to this notice.

In *NY* 857696, dated October 2, 1990, a mechanical transfer press was found to be classifiable in subheading 8462.99.00, HTSUS, a provision for other presses for working metal. This ruling was based on a classification methodology under the HTSUS predecessor tariff nomenclature, the Tariff Schedules of the United States (TSUS). *NY* 857696 is set forth as "Attachment A" to this document.

It is now Customs position that mechanical transfer presses are classifiable in subheading 8462.10.00, HTSUS, as die-stamping machines (including presses). Pursuant to 19 U.S.C. 1625(c)(1)), Customs intends to revoke *NY* 857696 and any other ruling not specifically identified to reflect the proper classification of mechanical transfer presses pursuant to the analysis in *HQ* 965247, which is set forth as "Attachment B" to this document. Additionally, pursuant to 19 U.S.C. 1625(c)(2), Customs intends to revoke any treatment it previously accorded to substantially identical transactions. Before taking this action, we will give consideration to any written comments timely received.

Dated: September 14, 2001.

MARVIN AMERNICK,
(for John Durant, Director,
Commercial Rulings Division.)

Bensenville, IL 60106

Re: The tariff classification of a mechanical transfer press from Japan.

DEAR MS. NELSON:

This classification decision under the Harmonized Tariff Schedule of the United States (HTS) is being issued in accordance with the provisions of Section 177 of the Customs Regulations (19 C.F.R. 177).

DATE OF INQUIRY:	October 2, 1990
ON BEHALF OF:	IHI, Inc.
DESCRIPTION OF MERCHANDISE:	The mechanical transfer press features a transfer feed unit that can be driven independently to permit feed rail connect/

	disconnect, finger adjustment and tryout. The unit also has an automatic quick die changing system.
HTS PROVISION:	Presses for working metal: Other: Mechanical transfer presses
HTS SUBHEADING:	8462.99.0035
RATE OF DUTY:	4.4 percent ad valorem
OTHER:	Mechanical transfer presses from Japan imported into the United States are subject to additional dumping duties.

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the documents have been filed without a copy, this ruling should be brought to the attention of the Customs officer handling the transaction.

JEAN F. MAGUIRE,
Area Director,
New York Seaport.

Category: Classification
Tariff No. 8462.10.00

KRISTINE M. NELSON
HARPER, ROBINSON & CO.,
411 E. Irving Park Road
Bensenville, IL 60106

Re: *NY* 857696 Revoked; Mechanical Transfer Press.

DEAR MS. NELSON:

In *NY* 857696, which the then-Area Director of Customs, now the Director of Customs National Commodity Specialist Division, New York, issued to you on November 8, 1990, on behalf of IHI, Inc., a mechanical transfer press was found to be classifiable in a provision for other presses for working metal, in subheading 8462.99.00 (now 80), Harmonized Tariff Schedule of the United States (HTSUS). We have reconsidered this classification and now believe that it is incorrect.

Facts:

Mechanical transfer presses are machine tools which utilize tools called dies to produce stamped parts for a variety of automotive and industrial applications. In operation, sheet metal stock is moved by a transfer mechanism from station to station within the press where, by force or pressure, the dies perform combinations of cutting, forming, trimming and sizing operations as the part gradually takes shape.

The HTSUS provisions under consideration are as follows:

8462	Machine tools (including presses) for working metal by * * * die stamping: * * *:
8462.10.00	Forging or die-stamping machines (including presses) and hammers
* * * * * * *	
	Other:
8462.99	Other
8462.99.80	Other

Issue:

Whether mechanical transfer presses are die-stamping machines for tariff purposes.

Law and Analysis:

Under General Rule of Interpretation (GRI) 1, Harmonized Tariff Schedule of the United States (HTSUS), goods are to be classified according to the terms of the headings and any relative section or chapter notes, and provided the headings or notes do not require otherwise, according to GRIs 2 through 6.

The Harmonized Commodity Description and Coding System Explanatory Notes (ENs) constitute the official interpretation of the Harmonized System at the international level. Though not dispositive, the ENs provide a commentary on the scope of each heading of the HTSUS. Customs believes the ENs should always be consulted. *See* T.D. 89–80. 54 Fed. Reg. 35127, 35128 (Aug. 23, 1989).

Where not defined in the legal text of the HTSUS, either in a section or chapter note, or clearly described in the ENs, a tariff term is construed in accordance with its common and commercial meanings, which are presumed to be the same. In technical areas, Customs places great emphasis on industry-specific lexicons in determining the common meaning of a term. These lexicons tend to define terms with greater specificity than do general purpose dictionaries. *See Brown-Boveri Corp. v. United States*, 55 CCPA 19, 23, C.A.D. 870 (1966), and cases cited. The Glossary of Mechanical Press Terms, published by the American Society of Mechanical Engineers (ASME) as American National Standard B5.49M (1984), defines *stamping* as:

> The end product of a press operation, or a series of operations, wherein a piece part is generated by processing flat (or perforated) strip or sheet stock between the opposing members of a die. During the operation(s), the material is subjected to pressure sufficient to cut the part, or form the part, or both, into the required configuration. A general tern used to describe the process, or the press operations, or both.

The ENs to heading 8462, on pp.1383 and 1384, indicate that stamping (or cutting out) is a process for forcing metal, by impact or pressure, to fill the hollows of metal moulds called dies. Generally, a press is used. Stamping machines can utilize special cutting dies to eliminate the flash produced during stamping or cutting out. The finishing operation carried out by a precision die-stamper is described as sizing, and produces the necessary precise dimensions. It is apparent that die-stamping presses are capable of numerous machining operations that produce finished parts. Transfer dies consist of a series of stamping dies that progressively form the part, usually starting with a drawing or forming operation, then trimming, piercing, flanging, etc. Multiple dies/stations are typically required to complete the stamping operations on a part, and they are usually contained in a single press. The available information leads us to conclude that multiple transfer presses are a type of die stamping machine and should be so classified.

Holding:

Under the authority of GRI 1, the mechanical transfer press the subject of *NY* 857696 is provided for in heading 8462. It is classifiable in subheading 8462.10.00, HTSUS, a provision for die-stamping machines (including presses). Accordingly, *NY* 857696 is revoked.

JOHN DURANT,
Director,
Commercial Rulings Division.

PROPOSED REVOCATION OF RULING LETTERS AND TREATMENT RELATING TO CLASSIFICATION OF MILK PROTEIN CONCENTRATE

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of proposed revocation of ruling letters and treatment relating to the classification of milk protein concentrate.

SUMMARY: Pursuant to section 625(c), Tariff Act of 1930 (19 U.S.C. 1625(c)), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs intends to revoke three ruling letters pertaining to the tariff classification of milk protein concentrate and any treatment previously accorded by the Customs Service to substantially identical transactions. Comments are invited on the correctness of the intended action.

DATE: Comments must be received on or before November 2, 2001.

ADDRESS: Written comments are to be addressed to: U.S. Customs Service, Office of Regulations and Rulings, Attention: Regulations Branch, 1300 Pennsylvania Avenue. N.W., Washington, D.C. 20229. Comments submitted may be inspected at the same address.

FOR FURTHER INFORMATION CONTACT: Peter T. Lynch, General Classification Branch, 202–927–1396.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On December 8, 1993, Title VI, (Customs Modernization), of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057) (hereinafter "Title VI"), became effective. Title VI amended many sections of the Tariff Act of 1930, as amended, and related laws. Two new concepts which emerge from the law are **"informed compliance"** and **"shared responsibility."** These concepts are premised on the idea that in order to maximize voluntary compliance with Customs laws and regulations, the trade community needs to be clearly and completely informed of its legal obligations. Accordingly, the law imposes a greater obligation on Customs to provide the public with improved information concerning the trade community's responsibilities and rights under the Customs and related laws. In addition, both the trade and Customs share responsibility in carrying out import requirements. For example, under section 484 of the Tariff Act of 1930, as amended, (19 U.S.C. §1484) the importer of record is responsible for using reasonable care to enter, classify and value imported merchandise, and provide any other information necessary to enable Customs to properly assess duties, collect accurate statistics and determine whether any other applicable legal requirement is met.

Pursuant to section 625(c)(1), Tariff Act of 1930 (19 U.S.C. 1625(c)(1)), as amended by section 623 of Title VI, this notice advises interested parties that Customs intends to revoke a ruling letter pertaining to the tariff classification of milk protein concentrate. Although in this notice Customs is specifically referring to three rulings, New York Ruling Letter (NY) 816940, dated December 6, 1995, NY B80989, dated January 16, 1997, and NY D83787, dated November 13, 1998, this notice covers any rulings on this merchandise which may exist but have not been specifically identified. Customs has undertaken reasonable efforts to search existing databases for rulings in addition to the one identified. No further rulings have been found. This notice will cover any rulings on this merchandise which may exist but have not been specifically identified. Any party who has received an interpretive ruling or decision (i.e., ruling letter, internal advice memorandum or decision or protest review decision) on the merchandise subject to this notice, should advise the Customs Service during this notice period.

Similarly, pursuant to section 625(c)(2), Tariff Act of 1930 (19 U.S.C. 1625(c)(2)), as amended by section 623 of Title VI, Customs intends to revoke any treatment previously accorded by the Customs Service to substantially identical transactions. This treatment may, among other reasons, be the result of the importer's reliance on a ruling issued to a third party, Customs personnel applying a ruling of a third party to importations of the same or similar merchandise, or the importer's or Customs previous interpretation of the Harmonized Tariff Schedule of the United States (HTSUS). Any person involved in substantially identical transactions should advise Customs during this notice period. An importer's failure to advise the Customs Service of substantially identical transactions or of a specific ruling not identified in this notice, may raise issues of reasonable care on the part of the importer or their agents for importations of merchandise subsequent to this notice.

In NY 816940, dated December 6, 1995, NY B80989, dated January 16, 1997, and NY D83787, dated November 13, 1998, the classification of a product commonly referred to as milk protein concentrate was determined to be in heading 0404.90.1000, HTSUS, which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, milk protein concentrates. These ruling letters are set forth in Attachments "A" through "C" to this document. Since the issuance of those rulings, Customs has had a chance to review the classification of this merchandise and has determined that the classification set forth is in error.

It is now Customs position, because of their composition, that the milk protein concentrates described in these rulings are classified in subheading 0404.90.3000, HTSUS, which provides for diary products described in additional U.S. note 1 to chapter 4, further described in

additional U.S. note 10 to chapter and entered pursuant to its provisions.

Customs, pursuant to 19 U.S.C. 1625(c)(1), intends to revoke NY 816940, NY B80989, and NY D83787, and any other ruling not specifically identified to reflect the proper classification of the merchandise pursuant to the analysis set forth in Proposed Headquarters Ruling Letters (HQ) 965212, 965213 and 965214, (*see* Attachments "D" through "F" this document). Additionally, pursuant to 19 U.S.C. 1625(c)(2), Customs intends to revoke any treatment previously accorded by the Customs Service to substantially identical transactions. Before taking this action, consideration will be given to any written comments timely received.

Dated: September 11, 2001.

MARVIN AMERNICK,
(for John Durant, Director,
Commercial Rulings Division.)

Re: The tariff classification of milk protein concentrate from Denmark.

DEAR MS. MANCIAS:

In your letter, dated November 20, 1995, you have requested a tariff classification ruling on behalf of your client, MD Foods Ingredients, Inc., Rosemont, IL. The product, MPC 60, is milk protein concentrate. The ingredients are protein (60 percent minimum), lactose (16 percent maximum), fat (12.5 percent maximum), ash (7.5 percent maximum), and moisture (4.5 percent maximum). The pH is 6.7.

MPC 60 is a spray dried, ultrafiltered milk protein, made from pasteurized skim milk. It is designed to be used as a flavor enhancer in food.

The applicable subheading for the milk protein concentrate, MPC 60, will be 0404.90.1000, Harmonized Tariff Schedule of the United States (HTS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included, other, milk protein concentrates. The rate of duty will be 0.43 cents per kilogram. This ruling is being issued under the provisions of Section 177 of the Customs Regulations (19 C.F.R. 177).

A copy of the ruling or the control number indicated above should be provided with the entry documents filed at the time this merchandise is imported. If you have any questions regarding the ruling, contact National Import Specialist Ralph Conte at (212) 466–5759.

ROGER J. SILVESTRI,
Director,
National Commodity Specialist Division.

Chicago, IL 60661–3693

Re: The tariff classification of milk protein concentrate from Ireland.

DEAR MR. SEELY:

In your letter, dated December 12, 1996, you have requested a tariff classification ruling on behalf of your client, Kerry Ingredients, Beloit, WI.

The product is milk protein concentrate. The ingredients are 46 percent butterfat, 44 percent protein, 6 percent lactose, and 4 percent ash.

The milk protein concentrate is manufactured by the ultrafiltration of pasteurized, whole cow's milk. The concentrate is homogenized, pasteurized, and spray dried to produce a powder. The product will be used as an ingredient in a variety of powdered ingredients and seasonings that are manufactured domestically by the importer. It will be imported in 50 pound multi-wall bags.

The applicable subheading for the milk protein concentrate will be 0404.90.1000, Harmonized Tariff Schedule of the United States (HTS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included, other, milk protein concentrates. The rate of duty will be 0.41 cents per kilogram.

This ruling is being issued under the provisions of Part 177 of the Customs Regulations (19 FR 177).

A copy of the ruling or the control number indicated above should be provided with the entry documents filed at the time this merchandise is imported. If you have any questions regarding the ruling, contact National Import specialist Ralph Conte at (212) 466–5759.

GWENN KLEIN KIRSCHNER,
Chief, Special Products Branch,

Re: The tariff classification of milk protein concentrate from Denmark.

DEAR MS. MANCIAS:

In your letter, dated October 16, 1998, you have requested a tariff classification ruling on behalf of your client, MD Foods Ingredients, Inc, Rosemont, IL.

The product, "PSD 852," is spray dried milk protein concentrate. It contains, by weight, 41 percent protein, 29 percent fat, 7 percent minerals, and 6 percent moisture. The pH is 6.5–6.8 percent. "PSD 852" will be used as a flavor enhancer in food.

The applicable subheading for "PSD 852" will be 0404.90.1000, Harmonized Tariff Schedule of the United States (HTS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included, other, milk protein concentrates. The rate of duty will be 0.39 cents per kilogram.

This ruling is being issued under the provisions of Part 177 of the Customs Regulations (19 CFR 177).

A copy of the ruling or the control number indicated above should be provided with the entry documents filed at the time this merchandise is imported. If you have any questions regarding the ruling, contact National Import specialist Ralph Conte at (212) 466–5759.

Re: Milk Protein Concentrate; NY 816940 revoked.

DEAR MS. MANCIAS:

This is in reference to NY 816940, dated December 6, 1995, issued to you on behalf of MD Foods Ingredients, Inc., by the Director, National Commodity Specialist Division, New York, in which an article, identified as milk protein concentrate, MPC 60, was classified in subheading 0404.90.10, Harmonized Tariff Schedule of the United States, (HTSUS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, milk protein concentrates. We have reviewed that ruling and determined that the classification provided is incorrect. Pursuant to the analysis set forth below, the correct classification for the article is subheading 0404.90.30, HTSUS, which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, other, dairy products described in additional U.S. note 1 to chapter 4: described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.

Facts:

According to NY 816940, MPC 60, is a spray dried, ultrafiltered milk product, made from pasteurized skim milk, composed of the following ingredients: protein (60 percent minimum), lactose (16 percent maximum), fat (12.5 percent maximum), ash (7.5 percent maximum), and moisture (4.5 percent maximum). The pH is 6.7. The article is said to be designed to be used as a flavor enhancer in food.

Issue:

What is the classification of the milk protein concentrate, MPC–60?

Law and Analysis:

Merchandise is classifiable under the Harmonized Tariff Schedule of the United States (HTSUS) in accordance with the General Rules of Interpretation (GRIs). The systematic detail of the HTSUS is such that virtually all goods are classified by application of GRI 1, that is, according to the terms of the headings of the tariff schedule and any relative Section or Chapter Notes. In the event that the goods cannot be classified solely on the basis of GRI 1, and if the headings and legal notes do not otherwise require, the remaining GRIs may then be applied in order.

In understanding the language of the HTSUS, the Harmonized Commodity Description and Coding System Explanatory Notes may be utilized. The Explanatory Notes (ENs), although not dispositive or legally binding, provide a commentary on the scope of each heading of the HTSUS, and are the official interpretation of the Harmonized System at the international level. *See* T.D. 89–80, 54 Fed. Reg. 35127, 35128 (August 23, 1989).

The HTSUS headings under consideration are as follows:

0404	Whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included:
* * * * * * *	
0404.90	Other:
0404.90.1000	Milk protein concentrates
	Other:
	Dairy products described in additional U.S. note 1 to chapter 4:
0404.90.2800	Described in general note 15 of the tariff schedule and entered pursuant to its provisions.
0404.90.3000	Described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.
0404.90.5000	Other[1]

The products being classified are described as milk protein concentrates produced by the ultrafiltration of pasteurized skim milk. Additional U.S. note 13 to Chapter 4 describes "Milk protein concentrates" as follows:

> 13. For purposes of subheading 0404.90.10, the term "milk protein concentrate" means any complete milk protein (casein plus lactalbumin) concentrate that is 40 percent or more protein by weight.

We must determine whether the instant products which are a mixture of concentrated milk protein and concentrated milk fat fall within the scope of Additional U.S. note 13.

We will begin by pointing out that Additional U.S. note 13 does not define the term "milk protein concentrate." Reading the note as a definition of "milk protein concentrate" would require using the term to define itself. Rather, the note is a statement that defines the range of milk protein concentrates which will be included within subheading 0404.90.10.

As stated above, the term "milk protein concentrate" is not defined by Additional U.S. note 13 to chapter 4. Further, it is not defined elsewhere in the Tariff or ENs. In the absence of a tariff definition, and if there is no Congressional intent to the contrary, HTSUS terms are understood to be consonant with their common and commercial meaning; and these meanings are presumed to be the same. *DMV USA, INC. v. United States*, ____ CIT ____, Slip Op. 01–99, Aug 10, 2001 (citing *Carl Zeiss, Inc. v. United States*, 195 F.3d 1375, at 1379 (Fed. Cir. 1999); *Simod Am. Corp. v. United States*, 872 F2d 1572, 1575 (Fed. Cir. 1989)). It is well settled that to determine the common meaning of a tariff term, "courts may and do consult dictionaries, scientific authorities, and other reliable sources of information * * *." *Nippon Kogaku, Inc. v. United States*, 69 CCPA 89, 92, 673 F.2d 380 (1982).

The word "concentrate" is defined in the *Oxford English Dictionary*, (2d. Ed. On CD-ROM), as "to increase the strength (of a solution or liquid) by contraction of its volume (e.g., by evaporation)." *The Random House Dictionary of the English Language*, (Unabridged Edition, 1973), defines "concentrate" as "to intensify; make denser, stronger, or purer by removing or reducing the foreign or inessential: *to concentrate fruit juice; to concentrate a sauce by boiling it down.*"

The *Oxford English Dictionary* defines the word "protein" as "In current use any one of a class of organic compounds, the proteins, consisting of carbon, hydrogen, oxygen, and ni-

[1] See subheadings 9904.04.50–9904.05.01.

trogen, with a little sulphur, in complex and more or less unstable combination; forming an important part of all living organisms, and the essential nitrogenous constituents of the food of animals; obtained as amorphous solids, differing in solubility and other properties, and usually coagulable by heat. Also called albuminoids, and very generally proteids."

The *Oxford English Dictionary* defines the word "milk" as "[A]n opaque white or bluish-white fluid secreted by the mammary glands of the female individuals of the Mammalia including man, and adapted for the nourishment of their young."

Based on these definitions, the common dictionary meaning of the words "milk protein concentrate" would be a protein product derived from milk in which the milk protein content has been intensified or purified by the removal of "foreign or inessential" milk constituents, such as water, minerals and lactose. The identity of a concentrate as a milk protein product would require that such a product contain milk protein as its sole substantive constituent, since the presence of two or more substantive, valuable or useful constituents would result in a product with the character of a mixture. This other product would not have the essential character of a milk protein product, but would be a mixture of milk protein and something else.

The dairy industry has specific terminology and parameters when referring to milk protein concentrate. A publication of the International Dairy Federation (IDF), *New Applications of Membrane Processes*, IDF Special Issue 9201, May 1992, Chapter 5, on "Milk Protein Concentrate" by A. Novak, of the Hungarian Dairy Research Institute, Mosonmagyrovar, Hungary, contains a discussion of the product. The relevant terminology and composition of the product is discussed as follows:

"As a result of the research carried out in recent years, milk protein concentrates with different protein contents have been produced by ultrafiltration for various utilization purposes. There is a great diversity of terms used in the literature dealing with these products: 'retenate powder', 'native milk protein concentrate', 'ultrafiltrated milk protein concentrate', 'milk powder from ultrafiltrated skim milk', skim milk retenate powder', 'high protein lactose free milk powder'. According to recommendations for standardizing the nomenclature within IDF, the terms 'milk protein concentrate' (MPC) and 'milk protein' (MP) will be used for products with a protein content of 50–85% and over 85%, respectively, if they are used using membrane separation. The actual protein content is indicated by the figure written after MPC or MP."

"MPC with defined functional properties is a preserved "milk protein product" which is produced from partially skimmed milk or skim milk by heat treatment (HTST, UHT), by partial removal of lactose and minerals, by protein concentration carried out with membrane separation (UF, sometimes with added diafiltration) and by water removal by evaporation (EV), spray-drying (SD) or freeze-drying (FD). It contains the casein and the whey proteins in their original proportions."

"The production of MPC is a process based on protein concentration by UF as well as preservation by heat treatment and water removal."

"The amounts of milk components remaining in the ultrafiltrated concentrate (retentate) and their proportions depend on the membrane cut-off, the UF concentration ratio and the degree of diafiltration (DF). The main components are proteins, minerals bound to the protein (Ca, P, Zn), lactose and lipids. The protein content of MPC can be selected in the range 50–90% protein/solids ratio. Typical compositions of MPC with 75 and 80% protein contents are shown in Table 5.1." [Table 5.1 shows a fat content of 1.5% for MPC–75 and 1.7% for MPC–80.]

Products which conform to the industry standard for MPC contain complete milk proteins, in their original proportions as their single substantive material (in terms of value and utility) with only residual levels of milk and fat. This contrasts with the instant product, MPC 60, with concentrations of 16% lactose and 12.5% fat.

The additional milk and fat concentrations in the instant MPC 60 product remove it from the class of products referred to a milk protein concentrate and place it into the category of a mixture of milk protein concentrate with milk fat, or ultrafiltrated milk. Milk protein products from which lactose, water and minerals have been removed, have the character of protein products, and have protein as their sole value. The instant MPC 60 and similar articles are mixtures of the valuable constituents of milk such as protein, lactose and fat are milk concentrates. Accordingly, because MPC 60 contains over 5.5 percent milkfat, and since it is suitable for use as an ingredient in the commercial production of edible articles, MPC 60 is classifiable in subheading 0404.90.3000, HTSUS. If the quota quantity

allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

Holding:

MPC 60 which contains over 5.5 percent milkfat, and is suitable for use as an ingredient in the commercial production of edible articles, is classifiable in subheading 0404.90.3000, HTSUS, which provides for dairy products described in additional U.S. note 1 to chapter 4: * * * described in additional U.S. note 10 to this chapter and entered pursuant to its provisions. If the quota quantity allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

NY 816940, dated December 6, 1995, is hereby revoked.

JOHN DURANT,
Director,
Commercial Rulings Division.

Re: Milk Protein Concentrate; NY B80989 revoked.

DEAR MR. SEELY:

This is in reference to NY B80989, dated January 16, 1997, issued to you on behalf of Kerry Ingredients, Beloit, WI., by the Director, National Commodity Specialist Division, New York, in which a milk protein concentrate was classified in subheading 0404.90.10, Harmonized Tariff Schedule of the United States, (HTSUS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, milk protein concentrates. We have reviewed that ruling and determined that the classification provided is incorrect. Pursuant to the analysis set forth below, the correct classification for the article is subheading 0404.90.30, HTSUS, which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, other, dairy products described in additional U.S. note 1 to chapter 4: described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.

Facts:

According to NY B80989, the product is a homogenized, pasteurized, spray dried powder manufactured by the ultrafiltration of whole cows milk. The product is composed of the following ingredients (by weight): 44 percent protein, 46 percent butterfat, 6 percent lactose, and 4 percent ash. The article is said to be designed to be used as an ingredient in a variety of powdered ingredients and seasonings that are manufactured domestically. The product will be imported in 50-pound multi-wall bags.

Issue:

What is the classification of a milk protein concentrate?

Law and Analysis:

Merchandise is classifiable under the Harmonized Tariff Schedule of the United States (HTSUS) in accordance with the General Rules of Interpretation (GRIs). The systematic

detail of the HTSUS is such that virtually all goods are classified by application of GRI 1, that is, according to the terms of the headings of the tariff schedule and any relative Section or Chapter Notes. In the event that the goods cannot be classified solely on the basis of GRI 1, and if the headings and legal notes do not otherwise require, the remaining GRIs may then be applied in order.

In understanding the language of the HTSUS, the Harmonized Commodity Description and Coding System Explanatory Notes may be utilized. The Explanatory Notes (ENs), although not dispositive or legally binding, provide a commentary on the scope of each heading of the HTSUS, and are the official interpretation of the Harmonized System at the international level. *See* T.D. 89–80, 54 Fed. Reg. 35127, 35128 (August 23, 1989).

The HTSUS headings under consideration are as follows:

0404	Whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included:
* * * * * * *	
0404.90	Other:
0404.90.1000	Milk protein concentrates
	Other:
	Dairy products described in additional U.S. note 1 to chapter 4:
0404.90.2800	Described in general note 15 of the tariff schedule and entered pursuant to its provisions.
0404.90.3000	Described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.
0404.90.5000	Other[1]

The products being classified are described as milk protein concentrates produced by the ultrafiltration of pasteurized skim milk. Additional U.S. note 13 to Chapter 4 describes "Milk protein concentrates" as follows:

> 13. For purposes of subheading 0404.90.10, the term "milk protein concentrate" means any complete milk protein (casein plus lactalbumin) concentrate that is 40 percent or more protein by weight.

We must determine whether the instant products which are a mixture of concentrated milk protein and concentrated milk fat fall within the scope of Additional U.S. note 13.

We will begin by pointing out that Additional U.S. note 13 does not define the term "milk protein concentrate." Reading the note as a definition of "milk protein concentrate" would result in using the term to define itself. Rather, the note is a statement which defines the range of milk protein concentrates which will be included within subheading 0404.90.10.

As stated above, the term "milk protein concentrate" is not defined by Additional U.S. note 13 to chapter 4. Further, it is not defined elsewhere in the Tariff or ENs. In the absence of a tariff definition, and if there is no Congressional intent to the contrary, HTSUS terms are understood to be consonant with their common and commercial meaning; and these meanings are presumed to be the same. *DMV USA, INC. v. United States*, _____ CIT ____, Slip Op. 01–99, Aug 10, 2001 (citing *Carl Zeiss, Inc. v. United States*, 195 F.3d 1375, at 1379 (Fed. Cir. 1999); *Simod Am. Corp. v. United States*, 872 F2d 1572, 1575 (Fed. Cir. 1989)). It is well settled that to determine the common meaning of a tariff term, "courts may and do consult dictionaries, scientific authorities, and other reliable sources of information * * *." *Nippon Kogaku, Inc. v. United States*, 69 CCPA 89, 92, 673 F.2d 380 (1982).

Accordingly, the word "concentrate" is defined in the *Oxford English Dictionary*, (2d. Ed. On CD-ROM), as "to increase the strength (of a solution or liquid) by contraction of its volume (e.g., by evaporation)." *The Random House Dictionary of the English Language*, (Unabridged Edition, 1973), defines "concentrate" as "to intensify; make denser, stronger, or purer by removing or reducing the foreign or inessential: *to concentrate fruit juice; to concentrate a sauce by boiling it down.*"

The *Oxford English Dictionary* defines the word "protein" as "In current use any one of a class of organic compounds, the proteins, consisting of carbon, hydrogen, oxygen, and nitrogen, with a little sulphur, in complex and more or less unstable combination; forming an important part of all living organisms, and the essential nitrogenous constituents of the

[1] See subheadings 9904.04.50–9904.05.01.

food of animals; obtained as amorphous solids, differing in solubility and other properties, and usually coagulable by heat. Also called albuminoids, and very generally proteids."

The *Oxford English Dictionary* defines the word "milk" as "[A]n opaque white or bluish-white fluid secreted by the mammary glands of the female individuals of the Mammalia including man, and adapted for the nourishment of their young."

Based on these definitions, the common dictionary meaning of the words "milk protein concentrate" would be a protein product derived from milk in which the milk protein content has been intensified or purified by the removal of "foreign or inessential" milk constituents, such as water, minerals and lactose. The identity of a concentrate as a milk protein product would require that such a product contain milk protein as its sole substantive constituent, since the presence of two or more substantive, valuable or useful constituents would result in a product with the character of a mixture. This other product would not have the essential character of a milk protein product, but would be a mixture of milk protein and something else.

The dairy industry has specific terminology and parameters when referring to milk protein concentrate. A publication of the International Dairy Federation (IDF), *New Applications of Membrane Processes*, IDF Special Issue 9201, May 1992, Chapter 5, on "Milk Protein Concentrate" by A. Novak, of the Hungarian Dairy Research Institute, Mosonmagyrovar, Hungary, contains a discussion of the product.

"As a result of the research carried out in recent years, milk protein concentrates with different protein contents have been produced by ultrafiltration for various utilization purposes. There is a great diversity of terms used in the literature dealing with these products: 'retenate powder', 'native milk protein concentrate', 'ultrafiltrated milk protein concentrate', 'milk powder from ultrafiltrated skim milk', skim milk retenate powder', 'high protein lactose free milk powder'. According to recommendations for standardizing the nomenclature within IDF, the terms 'milk protein concentrate' (MPC) and 'milk protein' (MP) will be used for products with a protein content of 50–85% and over 85%, respectively, if they are used using membrane separation. The actual protein content is indicated by the figure written after MPC or MP."

"MPC with defined functional properties is a preserved "milk protein product" which is produced from partially skimmed milk or skim milk by heat treatment (HTST, UHT), by partial removal of lactose and minerals, by protein concentration carried out with membrane separation (UF, sometimes with added diafiltration) and by water removal by evaporation (EV), spray-drying (SD) or freeze-drying (FD). It contains the casein and the whey proteins in their original proportions."

"The production of MPC is a process based on protein concentration by UF as well as preservation by heat treatment and water removal."

"The amounts of milk components remaining in the ultrafiltrated concentrate (retentate) and their proportions depend on the membrane cut-off, the UF concentration ratio and the degree of diafiltration (DF). The main components are proteins, minerals bound to the protein (Ca, P, Zn), lactose and lipids. The protein content of MPC can be selected in the range 50–90% protein/solids ratio. Typical compositions of MPC with 75 and 80% protein contents are shown in Table 5.1." [Table 5.1 shows a fat content of 1.5% for MPC–75 and 1.7% for MPC–80.]

Products which conform to the industry standard for MPC contain complete milk proteins, in their original proportions as their single substantive material (in terms of value and utility) with only residual levels of milk and fat. This contrasts with the instant product which has concentrations of 6% lactose and 46% fat.

The additional milk and fat concentrations in the instant product remove it from the class of products referred to a milk protein concentrate and place it into the category of a mixture of milk protein concentrate with milk fat, or ultrafiltrated milk. Milk protein products from which lactose, water and minerals have been removed, have the character of protein products, and have protein as their sole value. The instant powdered milk concentrate and similar articles are mixtures of the valuable constituents of milk such as protein, lactose and fat are milk concentrates. Accordingly, because the powdered milk concentrate contains over 5.5 percent milkfat, and since it is suitable for use as an ingredient in the commercial production of edible articles, the powdered milk concentrate is classifiable in subheading 0404.90.3000, HTSUS. If the quota quantity allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

Holding:

Powdered, milk concentrate which contains over 5.5 percent milkfat, and is suitable for use as an ingredient in the commercial production of edible articles, is classifiable in subheading 0404.90.3000, HTSUS, which provides for dairy products described in additional U.S. note 1 to chapter 4: * * * described in additional U.S. note 10 to this chapter and entered pursuant to its provisions. If the quota quantity allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

NY B80989, dated January 16, 1997, is hereby revoked.

JOHN DURANT,
Director,
Commercial Rulings Division.

Tariff No. 0404.90.30/0404.90.50

MS. MICHELLE MANCIAS
SONNENBERG AND ANDERSON
200 South Wacker Drive
Chicago, IL 60606

Re: Milk Protein Concentrate; NY D83787 revoked.

DEAR MS. MANCIAS:

This is in reference to NY D83787, dated November 13, 1998, issued to you on behalf of MD Foods Ingredients, Inc., by the Director, National Commodity Specialist Division, New York, in which a milk protein concentrate, PSD 852, was classified in subheading 0404.90.10, Harmonized Tariff Schedule of the United States, (HTSUS), which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, milk protein concentrates. We have reviewed that ruling and determined that the classification provided is incorrect. Pursuant to the analysis set forth below, the correct classification for the article is subheading 0404.90.30, HTSUS, which provides for whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified of included, other, other, dairy products described in additional U.S. note 1 to chapter 4: described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.

Facts:

According to NY D83787, the product, PSD 852, is a spray dried milk protein concentrate made from fresh milk. The PSD 852 is composed of the following ingredients (by weight): 41 percent protein, 29 percent fat, a maximum 7 percent minerals, and maximum 6 percent moisture (not stated, but also 17% lactose). The pH range is 6.5–6.8. The article is said to be designed to be used as a flavor enhancer in foods.

Issue:

What is the classification of a milk protein concentrate, PSD 852?

Law and Analysis:

Merchandise is classifiable under the Harmonized Tariff Schedule of the United States (HTSUS) in accordance with the General Rules of Interpretation (GRIs). The systematic

detail of the HTSUS is such that virtually all goods are classified by application of GRI 1, that is, according to the terms of the headings of the tariff schedule and any relative Section or Chapter Notes. In the event that the goods cannot be classified solely on the basis of GRI 1, and if the headings and legal notes do not otherwise require, the remaining GRIs may then be applied in order.

In understanding the language of the HTSUS, the Harmonized Commodity Description and Coding System Explanatory Notes may be utilized. The Explanatory Notes (ENs), although not dispositive or legally binding, provide a commentary on the scope of each heading of the HTSUS, and are the official interpretation of the Harmonized System at the international level. *See* T.D. 89–80, 54 Fed. Reg. 35127, 35128 (August 23, 1989).

The HTSUS headings under consideration are as follows:

0404	Whey, whether or not concentrated or containing added sugar or other sweetening matter; products consisting of natural milk constituents, whether or not containing added sugar or other sweetening matter, not elsewhere specified or included:
* * * * * * *	
0404.90	Other:
0404.90.1000	Milk protein concentrates
	Other:
	Dairy products described in additional U.S. note 1 to chapter 4:
0404.90.2800	Described in general note 15 of the tariff schedule and entered pursuant to its provisions.
0404.90.3000	Described in additional U.S. note 10 to this chapter and entered pursuant to its provisions.
0404.90.5000	Other[1]

The products being classified are described as milk protein concentrates produced by the ultrafiltration of pasteurized skim milk. Additional U.S. note 13 to Chapter 4 describes "Milk protein concentrates" as follows:

> 13. For purposes of subheading 0404.90.10, the term "milk protein concentrate" means any complete milk protein (casein plus lactalbumin) concentrate that is 40 percent or more protein by weight.

We must determine whether the instant products which are a mixture of concentrated milk protein and concentrated milk fat fall within the scope of Additional U.S. note 13.

We will begin by pointing out that Additional U.S. note 13 does not define the term "milk protein concentrate." Reading the note as a definition of "milk protein concentrate" would result in using the term to define itself. Rather, the note is a statement which defines the range of milk protein concentrates which will be included within subheading 0404.90.10.

As stated above, the term "milk protein concentrate" is not defined by Additional U.S. note 13 to chapter 4. Further, it is not defined elsewhere in the Tariff or ENs. In the absence of a tariff definition, and if there is no Congressional intent to the contrary, HTSUS terms are understood to be consonant with their common and commercial meaning; and these meanings are presumed to be the same. *DMV USA, INC. v. United States*, _____ CIT ____, Slip Op. 01–99, Aug 10, 2001 (citing *Carl Zeiss, Inc. v. United States*, 195 F.3d 1375, at 1379 (Fed. Cir. 1999); *Simod Am. Corp. v. United States*, 872 F2d 1572, 1575 (Fed. Cir. 1989)). It is well settled that to determine the common meaning of a tariff term, "courts may and do consult dictionaries, scientific authorities, and other reliable sources of information * * *." *Nippon Kogaku, Inc. v. United States*, 69 CCPA 89, 92, 673 F.2d 380 (1982).

Accordingly, the word "concentrate" is defined in the *Oxford English Dictionary*, (2d. Ed. On CD-ROM), as "to increase the strength (of a solution or liquid) by contraction of its volume (e.g., by evaporation)." *The Random House Dictionary of the English Language*, (Unabridged Edition, 1973), defines "concentrate" as "to intensify; make denser, stronger, or purer by removing or reducing the foreign or inessential: *to concentrate fruit juice; to concentrate a sauce by boiling it down.*"

The *Oxford English Dictionary* defines the word "protein" as "In current use any one of a class of organic compounds, the proteins, consisting of carbon, hydrogen, oxygen, and nitrogen, with a little sulphur, in complex and more or less unstable combination; forming an important part of all living organisms, and the essential nitrogenous constituents of the

[1] See subheadings 9904.04.50–9904.05.01.

food of animals; obtained as amorphous solids, differing in solubility and other properties, and usually coagulable by heat. Also called albuminoids, and very generally proteids."

The *Oxford English Dictionary* defines the word "milk" as "[A]n opaque white or bluish-white fluid secreted by the mammary glands of the female individuals of the Mammalia including man, and adapted for the nourishment of their young."

Based on these definitions, the common dictionary meaning of the words "milk protein concentrate" would be a protein product derived from milk in which the milk protein content has been intensified or purified by the removal of "foreign or inessential" milk constituents, such as water, minerals and lactose. The identity of a concentrate as a milk protein product would require that such a product contain milk protein as its sole substantive constituent, since the presence of two or more substantive, valuable or useful constituents would result in a product with the character of a mixture. This other product would not have the essential character of a milk protein product, but would be a mixture of milk protein and something else.

The dairy industry has specific terminology and parameters when referring to milk protein concentrate. A publication of the International Dairy Federation (IDF), *New Applications of Membrane Processes*, IDF Special Issue 9201, May 1992, Chapter 5, on "Milk Protein Concentrate" by A. Novak, of the Hungarian Dairy Research Institute, Mosonmagyrovar, Hungary, contains a discussion of the product.

"As a result of the research carried out in recent years, milk protein concentrates with different protein contents have been produced by ultrafiltration for various utilization purposes. There is a great diversity of terms used in the literature dealing with these products: 'retenate powder', 'native milk protein concentrate', 'ultrafiltrated milk protein concentrate', 'milk powder from ultrafiltrated skim milk', skim milk retenate powder', 'high protein lactose free milk powder'. According to recommendations for standardizing the nomenclature within IDF, the terms 'milk protein concentrate' (MPC) and 'milk protein' (MP) will be used for products with a protein content of 50–85% and over 85%, respectively, if they are used using membrane separation. The actual protein content is indicated by the figure written after MPC or MP."

"MPC with defined functional properties is a preserved "milk protein product" which is produced from partially skimmed milk or skim milk by heat treatment (HTST, UHT), by partial removal of lactose and minerals, by protein concentration carried out with membrane separation (UF, sometimes with added diafiltration) and by water removal by evaporation (EV), spray-drying (SD) or freeze-drying (FD). It contains the casein and the whey proteins in their original proportions."

"The production of MPC is a process based on protein concentration by UF as well as preservation by heat treatment and water removal."

"The amounts of milk components remaining in the ultrafiltrated concentrate (retentate) and their proportions depend on the membrane cut-off, the UF concentration ratio and the degree of diafiltration (DF). The main components are proteins, minerals bound to the protein (Ca, P, Zn), lactose and lipids. The protein content of MPC can be selected in the range 50–90% protein/solids ratio. Typical compositions of MPC with 75 and 80% protein contents are shown in Table 5.1." [Table 5.1 shows a fat content of 1.5% for MPC–75 and 1.7% for MPC–80.]

Products which conform to the industry standard for MPC contain complete milk proteins, in their original proportions as their single substantive material (in terms of value and utility) with only residual levels of milk and fat. This contrasts with the instant product, PSD 852, with concentrations of 17% lactose and 29% fat.

The additional milk and fat concentrations in the instant PSD 852 product remove it from the class of products referred to a milk protein concentrate and place it into the category of a mixture of milk protein concentrate with milk fat, or ultrafiltrated milk. Milk protein products from which lactose, water and minerals have been removed, have the character of protein products, and have protein as their sole value. The instant PSD 852 and similar articles are mixtures of the valuable constituents of milk such as protein, lactose and fat are milk concentrates. Accordingly, because PSD 852 contains over 5.5 percent milkfat, and since it is suitable for use as an ingredient in the commercial production of edible articles, PSD 852 is classifiable in subheading 0404.90.3000, HTSUS. If the quota quantity allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

Holding:

PSD 852 which contains over 5.5 percent milkfat, and is suitable for use as an ingredient in the commercial production of edible articles, is classifiable in subheading 0404.90.3000, HTSUS, which provides for dairy products described in additional U.S. note 1 to chapter 4: * * * described in additional U.S. note 10 to this chapter and entered pursuant to its provisions. If the quota quantity allocated to the quota provision has been filled, then classification will be in 0404.90.5000, HTSUS, with any applicable safeguard duties.

NY D83787, dated November 13, 1998, is hereby revoked.

JOHN DURANT,
Director,
Commercial Rulings Division.

MODIFICATION OF RULING LETTER AND REVOCATION OF TREATMENT RELATING TO TARIFF CLASSIFICATION OF ARM COVERS

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of modification of ruling letter and revocation of treatment relating to tariff classification of arm covers.

SUMMARY: Pursuant to section 625(c), Tariff Act of 1930 (19 U.S.C. 1625(c)), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs is modifying one ruling letter pertaining to the tariff classification of arm covers under the Harmonized Tariff Schedule of the United States (HTSUS). Customs is also revoking any treatment previously accorded by Customs to substantially identical transactions. Notice of the proposed actions was published on July 11, 2001, in Volume 35, Number 28, of the CUSTOMS BULLETIN. No comments were received in response to the notice.

EFFECTIVE DATE: This action is effective for merchandise entered or withdrawn from warehouse for consumption on or after December 3, 2001.

FOR FURTHER INFORMATION CONTACT: Joe Shankle, Textiles Branch, (202) 927–2379.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On December 8, 1993, Title VI, (Customs Modernization), of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), (hereinafter "Title VI"), became effective. Title VI amended many sections of the Tariff Act of 1930, as amended, and related laws. Two new concepts that emerge from the law are **"informed compliance"** and **"shared responsibility."** These concepts

are premised on the idea that in order to maximize voluntary compliance with Customs laws and regulations, the trade community needs to be clearly and completely informed of its legal obligations. Accordingly, the law imposes a greater obligation on Customs to provide the public with improved information concerning the trade community's responsibilities and rights under the Customs and related laws. In addition, both the trade and Customs share responsibility in carrying out import requirements. For example, under section 484 of the Tariff Act of 1930, as amended (19 U.S.C. 1484), the importer of record is responsible for using reasonable care to enter, classify and value imported merchandise, and provide any other information necessary to enable Customs to properly assess duties, collect accurate statistics and determine whether any other applicable legal requirement is met.

Pursuant to Customs obligations, notice proposing to modify NY D88910, dated March 26, 1999, and to revoke any treatment accorded to substantially identical merchandise was published in the July 11, 2001, CUSTOMS BULLETIN, Volume 35, Number 28. No comments were received in response to the notice.

As stated in the proposed notice, this revocation will cover any rulings on the subject merchandise which may exist but which have not been specifically identified. Any party who has received an interpretive ruling or decision (i.e., ruling letter, internal advice memorandum or decision or protest review decision) on the merchandise subject to this notice should have advised Customs during the comment period.

Similarly, pursuant to section 625(c)(2), Tariff Act of 1930 (19 U.S.C. 1625(c)(2)), as amended by Title VI, Customs is revoking any treatment previously accorded by Customs to substantially identical transactions. This treatment may, among other reasons, have been the result of the importer's reliance on a ruling issued to a third party, Customs personnel applying a ruling of a third party to importations of the same or similar merchandise, or the importer's or Customs previous interpretation of the HTSUS. Any person involved in substantially identical transactions should have advised Customs during the comment period. An importer's reliance on a treatment of substantially identical transactions or on a specific ruling concerning the merchandise covered by this notice which was not identified in this notice may raise the rebuttable presumption of lack of reasonable care on the part of the importer or its agents for importations of merchandise subsequent to the effective date of this final decision.

In NY D88910, Customs classified arm covers constructed of knit fabric consisting of 85% cotton and 15% spandex, under heading 6307, HTSUSA, which provides, in pertinent part, for other textile articles.

It is now Customs position that arm covers of the type discussed herein, are classifiable as clothing accessories under subheading 6117.80.9510, HTSUSA, which provides for: "Other made up clothing accessories, knitted or crocheted: knitted or crocheted parts of garments or of clothing accessories: Other accessories: Other: Other * * *

Of cotton." It is also our position that the arm covers, which were imported with a waist belt, and sleeveless pullover, form a composite good.

Pursuant to 19 U.S.C. 1625(c)(1), Customs is modifying NY D88910, and any other ruling not specifically identified in order to reflect the proper classification of the merchandise pursuant to the analysis set forth in Headquarters Ruling Letter (HQ) 963874 (Attached). Additionally, pursuant to 19 U.S.C. 1625(c)(2), Customs is revoking any treatment previously accorded by the Customs Service to substantially identical transactions.

In accordance with 19 U.S.C. 1625(c), this ruling will become effective 60 days after publication in the CUSTOMS BULLETIN.

Dated: September 18, 2001.

JOHN ELKINS,
(for John Durant, Director,
Commercial Rulings Division.)

Tariff No. 6110.20.2075, HTSUSA

MR. HENRY TORAY
SPEED SOURCING, INC.
2140 City Gate Dr.
Columbus, OH 43219

Re: Modification of NY D88910; Classification of Arm Covers; Clothing Accessories; Composite Good.

DEAR MR. TORAY:

This letter is to inform you that Customs has reconsidered New York Ruling Letter (NY) D88910, issued to you on March 26, 1999, concerning the classification under the Harmonized Tariff Schedule of the United States Annotated (HTSUSA) of a knit waist belt, pullover, and arm covers. After review of that ruling, it has been determined that the classification of the arm covers in subheading 6307.90.9989, HTSUSA, was incorrect. In addition, the three articles form a composite good, which changes the classification of the waist belt as well. For the reasons that follow, this ruling modifies NY D88910.

Pursuant to section 625(c)(1) Tariff Act of 1930 (19 U.S.C. 1625(c)(1)) as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Agreement Implementation Act (Pub. L. 103–82, 107 Stat. 2057, 2186), notice of the proposed revocation of NY D88910 was published on July 11, 2001, in the CUSTOMS BULLETIN, Volume 35, Number 28. As explained in the notice, the period within which to submit comments on this proposal was until August 10, 2001. No comments were received in response to this notice.

Facts:

In NY D88910, Customs classified the arm covers at issue in heading 6307, HTSUSA, which is a residual or basket provision for textile articles. The arm covers, a knit fabric

waist belt, and a ladies sleeveless knit pullover, were all imported together. The three items are sold and marketed as a "make your own outfit." They are designed so that the buyer can wear the pullover by itself, with the arm covers, with the waist belt, or with the arm covers and the waist belt. The items do not attach to one another by any means. All three items are composed of knit fabric consisting of 85% cotton and 15% spandex.

The waist belt (Style 7004C) is a tube-like design, is 4 ½ inches wide, has a snap button pocket and is ribbed at the top and bottom.

The sleeveless pullover (Style 9405099) has no front or back opening, has a crewneck, falls at or above the waist, and has a ribbed bottom.

The arm covers (Style 0637C) are tube shaped, and cover the arm. They have ribbed ends to secure them to the wearer's arms.

Issue:

Should the arm covers be classified under heading 6117, HTSUSA, HTSUSA, as clothing accessories, or under heading 6307, HTSUSA, as other made up textile articles?

Analysis:

Classification under the HTSUSA is made in accordance with the General Rules of Interpretation (GRI). GRI 1 provides that the classification of goods shall be determined according to the terms of the headings of the tariff schedule and any relative Section or Chapter Notes. In the event that the goods cannot be classified solely on the basis of GRI 1, and if the headings and legal notes do not otherwise require, the remaining GRI may then be applied.

The Harmonized Commodity Description and Coding System, Explanatory Notes (EN), represent the official interpretation of the Harmonized System at the international level (for the 4 digit headings and the 6 digit subheadings) and facilitate classification under the HTSUSA by offering guidance in understanding the scope of the headings and GRI. The EN, although not dispositive or legally binding, provide a commentary on the scope of each heading of the HTSUS, and are generally indicative of the proper interpretation of these headings. See T.D. 89–80, 54 Fed. Reg. 35127, 35128 (August 23, 1989).

Heading 6117, HTSUSA, provides for "Other made up clothing accessories, knitted or crocheted; knitted or crocheted parts of garments or of clothing accessories." The term "accessory" is not defined in the tariff schedule or EN. Webster's New Collegiate Dictionary, (1977), defines "accessory" as a thing of secondary or subordinate importance or an object or device not essential in itself but adding to the beauty, convenience, or effectiveness of something else. In Headquarters Ruling Letter (HQ) 088540, dated June 3, 1991, Customs defined an accessory as an article that is related to the primary article, and intended for use solely or principally as an accessory. In heading 6117, HTSUSA, the accessories classifiable under this provision will be related to clothing, intended for use with clothing and of secondary importance to clothing. HQ 950470, dated January 7, 1992.

The alternative heading, 6307, HTSUSA, provides for other made up textile articles. This is not a true alternative in that heading 6307 is a "basket" provision intended to classify merchandise not provided for more specifically in other headings of the tariff. Accordingly, we must first determine whether classification is proper under heading 6117, HTSUSA, as clothing accessories. If not, we will address whether classification is proper under heading 6307, HTSUSA.

The EN to 6117, HTSUSA, and 6307, HTSUSA, both provide examples of articles that have similar characteristics as the arm covers under consideration. EN (6) to heading 6117, HTSUSA, lists sleeve protectors as being covered by the heading. Sleeve protectors are similar to arm covers in that they also provide protection for the arms. See HQ 961080, dated September 14, 1999 (ruling that polyurethane coated sleeve protectors that protect workers from animal fats and chemicals are clothing accessories); see also, HQ 961108 dated September 2, 1999; and HQ 961737, dated December 8, 1998.

The function of the arm cover is of primary importance when determining whether to classify it as a clothing accessory under 6117, HTSUSA. If the arm cover has a function completely divorced from any use with clothing and does not add to the beauty, convenience, or effectiveness, of clothing, it will not be considered a clothing accessory. HQ 952005, dated August 26, 1992.

In HQ 950659, Customs considered whether to classify arm covers that are similar to those now under consideration as clothing accessories. In that ruling, Customs revoked HQ 086378, dated April 9, 1990, that had classified arm covers as clothing accessories un-

der heading 6117, HTSUSA. Customs reclassified the arm covers under the basket provision of 6307, HTSUSA. The arm covers were described as:

> [T]ubular shaped items made of 43% angora, 18% lambswool, 26% polyamid and 13% elasthan which forms a fabric of a weft knit construction. They are specially designed to fit certain body parts, i.e., wrists, elbows, knees and backs. The articles are intended for use by people afflicted with arthritis or rheumatism. The primary purpose of these articles appears to be the maintenance of localized warmth, which in turn would provide greater comfort to the wearer. The wool and angora components also act to absorb perspiration and the elasticity of the items may in some cases provide support.

In making its decision to rescind its prior ruling, Customs considered whether the arm covers had a logical nexus with clothing. That is, did they either add to the clothing's (1) beauty, (2) convenience, or (3) effectiveness? Customs examined the function and use of the arm covers and concluded that the arm covers could not be considered clothing accessories because they did not satisfy any of the three requirements.

Applying these principles to the instant arm covers, Customs concludes that they are properly classifiable as clothing accessories. The arm covers satisfy all three of the requirements for clothing accessories, i.e., adding to clothing's beauty, convenience and effectiveness. The arm covers are composed of knit fabric in chief weight of cotton, as is the pullover; thus, the wearer is able to alter her clothing to suit her fashion needs. Moreover, the arm covers enable the wearer to conveniently and easily convert the sleeveless pullover into a long sleeved pull over, or vice versa, depending on the weather; thus, enhancing the convenience and effectiveness of the pullover.

For a similar ruling, see HQ 963734, dated March 28, 2001. In that ruling, Customs classified similar arm warmers as clothing accessories under heading 6117, HTSUSA. In HQ 963734, the arm warmers were designed to be worn with any short sleeved shirt. They were intended to be used by golfers and other sportsmen so that they could convert their regular short sleeved shirt into a long sleeved shirt and back again, depending on the weather.

The arm covers now under consideration are distinguishable from arm covers that have previously been classified by Customs as not being clothing accessories. See HQ 952005, dated August 26, 1992 (merino wool arm cover intended to be used for therapeutic purposes is not a clothing accessory); HQ 950470, dated January 7, 1992 (arm cover composed of neoprene rubber, and designed to retain heat for the treatment of arthritis and sporting injuries, is not a clothing accessory); HQ 954342, dated September 10, 1993 (wool arm covers designed to keep muscles and joints warm to reduce the discomfort associated with rheumatism and arthritis, are not clothing accessories). The arm covers in those rulings are distinguishable from those now under consideration, because they have no logical nexus with clothing. Instead they are wholly independent and separate from any items of clothing. Their function is to serve a therapeutic or medicinal purpose by fitting tightly over the arm thereby providing warmth and support. In contrast, the arm covers that are the subject of this ruling are not only clothing accessories, but they also have no medicinal or therapeutic purpose.

The arm covers are accessories to the sleeveless pullover and are properly classifiable at GRI 1 under heading 6117, HTSUSA. For a similar ruling, see HQ 963734, dated March 28, 2001.

The arm covers are imported, packaged, and sold along with the waist belt and sleeveless pullover. Therefore, it is necessary to consider classification of them in light of their relation to the waist belt and pullover.

Note 13, Section XI, provides:

> Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale. For the purposes of this note, the expression "*textile garments*" means garments of headings 6101 to 6114
> * * *

Because the arm covers and waist belt are clothing accessories under heading 6117, HTSUSA, they are not "textile garments" for the purposes of note 13 to Section XI. The requirement that they be classified in their own heading is not applicable. See HQ 084796, dated September 5, 1989.

The combination of the sleeveless pullover, arm covers, and waist belt meet the definition of composite goods set out in the EN. The EN define composite goods as follows:

> [C]omposite goods made up of different components shall be taken to mean not only those in which the components are attached to each other to form a practically inseparable whole but also those with separable components, provided these components are

adapted one to the other and are mutually complementary and that together they form a whole which would not normally be offered for sale in separate parts.

The arm covers and waist belt are adapted to, and are mutually complementary to the sleeveless pullover, as well as to each other. They are designed, sold and marketed as a "make your own" outfit. All three items are made up of knit fabric in chief weight of cotton and they are specially fitted to be worn together. They form a whole that would not normally be offered for sale separately. The waist belt and arm covers are dependent upon the sleeveless pullover to lend them any sort of functionality.

Following GRI 3(a), when two or more headings refer to only part of composite goods, the headings are equally specific, and classification must be determined by GRI 3(b). GRI 3(b) provides for classification based upon that component which gives the composite good its essential character. In this case, the sleeveless pullover is that component. The sleeveless pullover may be worn with or without the arm covers and the waist belt, which are accessories to the sleeveless pullover. The arm covers are used to convert the sleeveless pullover into a long sleeved garment. Likewise, the waist belt is used to alter the pullover such that it extends further down the torso. The arm covers and waist belt are accessories to the pullover, which imparts the essential character of the composite good.

Accordingly, the arm covers and waist belt are classified with the sleeveless pullover under subheading 6110.20.2075, HTSUSA.

Holding:

The arm covers are classified under subheading 6110.20.2075, HTSUSA, textile category 339, which provides for "Sweaters, pullovers, sweatshirts, waistcoats (vests) and similar articles, knitted or crocheted: Of cotton: Other, Other: Other: Women's or Girls'. The general column one rate of duty is 17.8% percent *ad valorem*.

The designated textile and apparel category may be subdivided into parts. If so, visa and quota requirements applicable to the subject merchandise may be affected. Since part categories are the result of international bilateral agreements which are subject to frequent negotiations and changes, we suggest that you check, close to the time of shipment, the *Status Report On Current Import Quotas (Restraint Levels)*, an issuance of the U.S. Customs Service, which is updated weekly and is available at the local Customs office.

Due to the changeable nature of the statistical annotation (the ninth and tenth digits of the classification) and the restraint (quota/visa) categories, you should contact the local Customs office prior to importing the merchandise to determine the current status of any import restraints or requirements.

Effect on Other Rulings:

NY D88910, dated March 26, 1999, is hereby MODIFIED. In accordance with 19 U.S.C. §1625(c), this ruling will become effective 60 days after its publication in the CUSTOMS BULLETIN.

JOHN ELKINS,
(for John Durant, Director,
Commercial Rulings Division.)

PROPOSED REVOCATION OF RULING LETTER AND TREATMENT RELATING TO TARIFF CLASSIFICATION OF ORGANIC ELECTRO-LUMINESCENT DISPLAY MODULES

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of proposed revocation of ruling letter and treatment relating to tariff classification of certain organic electro-luminescent (OEL) display modules.

SUMMARY: Pursuant to section 625(c), Tariff Act of 1930 (19 U.S.C. 1625(c)), as amended by section 623 of Title VI (Customs Modernization) of the North American Free Trade Agreement Implementation Act (Pub.L. 103–182, 107 Stat. 2057), this notice advises interested parties that Customs intends to revoke a ruling letter pertaining to the tariff classification of certain organic electro-luminescent (OEL) display modules under the Harmonized Tariff Schedule of the United States ("HTSUS"). Similarly, Customs proposes to revoke any treatment previously accorded by Customs to substantially identical transactions. Comments are invited on the correctness of the proposed action.

DATE: Comments must be received on or before November 2, 2001.

ADDRESS: Written comments are to be addressed to the U.S. Customs Service, Office of Regulations & Rulings. Attention: Regulations Branch, 1300 Pennsylvania Avenue N.W., Washington, D.C. 20229. Comments submitted may be inspected at the same address during regular business hours.

FOR FURTHER INFORMATION CONTACT: Tom Peter Beris, General Classification Branch, (202) 927–1726.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On December 8, 1993, Title VI, (Customs Modernization), of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182, 107 Stat. 2057), (hereinafter "Title VI"), became effective. Title VI amended many sections of the Tariff Act of 1930, as amended, and related laws. Two new concepts which emerge from the law are **"informed compliance"** and **"shared responsibility."** These concepts are premised on the idea that in order to maximize voluntary compliance with Customs laws and regulations, the trade community needs to be clearly and completely informed of its legal obligations. Accordingly, the law imposes a greater obligation on Customs to provide the public with improved information concerning the trade community's responsibilities and rights under the Customs and related laws. In addition, both the trade and Customs share responsibility in carrying out import requirements. For example, under section 484 of the Tariff Act of 1930, as amended (19 U.S.C. 1484), the importer of record is responsi-

ble for using reasonable care to enter, classify and value imported merchandise, and provide any other information necessary to enable Customs to properly assess duties, collect accurate statistics and determine whether any other applicable legal requirement is met.

Pursuant to section 625(c)(1), Tariff Act of 1930 (19 U.S.C. 1625(c)(1)), as amended by section 623 of Title VI, this notice advises interested parties that Customs intends to revoke New York Ruling Letter (NY) F82153 pertaining to the tariff classification of OEL display modules. Although in this notice Customs is specifically referring to one ruling, NY F82153, this notice covers any rulings on this merchandise which may exist but have not been specifically identified. Customs has undertaken reasonable efforts to search existing data bases for rulings in addition to the one identified. No further rulings have been found. Any party who has received an interpretive ruling or decision (i.e., ruling letter, internal advice memorandum or decision or protest review decision) on the merchandise subject to this notice should advise Customs during this notice period.

Similarly, pursuant to section 625(c)(2), Tariff Act of 1930, as amended (19 U.S.C. 1625(c)(2)), Customs intends to revoke any treatment previously accorded by Customs to substantially identical transactions. This treatment may, among other reasons, be the result of the importer's reliance on a ruling issued to a third party, Customs personnel applying a ruling of a third party to importations of the same or similar merchandise, or the importer's or Customs previous interpretation of the Harmonized Tariff Schedule of the United States. Any person involved in substantially identical transactions should advise Customs during this notice period. An importer's failure to advise Customs of substantially identical transactions or of a specific ruling not identified in this notice, may raise issues of reasonable care on the part of the importer or its agents for importations of merchandise subsequent to this notice.

In NY F82153, dated February 16, 2000, set forth as Attachment A to this document, Customs classified OEL display modules under subheading 8531.80.9025, HTSUS, which provides for other electric sound or visual signaling apparatus: Other apparatus: Other: Indicator panels: Other.

It is now Customs position that the OEL display modules are properly classifiable under subheading 8529.90.99, HTSUS, which provides for parts suitable for use solely or principally with the apparatus of headings 8525 to 8528: Other: Other: Other.

Pursuant to 19 U.S.C. 1625(c)(1), Customs intends to revoke NY F82153 and any other ruling not specifically identified in order to reflect the proper classification of the merchandise pursuant to the analysis set forth in proposed HQ 964887 (*see* "Attachment B" to this document). Additionally, pursuant to 19 U.S.C. 1625(c)(2), Customs intends to revoke any treatment previously accorded by the Customs Ser-

vice to substantially identical transactions. Before taking this action, we will give consideration to any written comments timely received.

Dated: September 19, 2001.

MARVIN AMERNICK,
(for John Durant, Director,
Commercial Rulings Division.)

Re: The tariff classification of an electroluminescent display module from Japan.

DEAR MR. ROCK:

In your letter dated December 22, 1999 you requested a tariff classification ruling.

As indicated by the submitted sample and descriptive literature, the electroluminescent display module consists of a 96 x 32 pixel graphic dot matrix indicator panel that has been attached to a printed circuit assembly. This module will be incorporated into a cellular mobile phone and will display the information associated with a telephone call.

The applicable subheading for the electroluminescent display module will be 8531.80.9025, Harmonized Tariff Schedule of the United States (HTS), which provides for other electric sound or visual signaling apparatus: Other: Other. The rate of duty will be 1.3 percent ad valorem.

In your request, you state the opinion that the correct classification for this display module should be in subheading 8531.20.0020, HTS, which provides for indicator panels incorporating liquid crystal devices (LCD's) or light emitting diodes (LED's). Since the module in question incorporates electroluminescent material as the medium, it cannot be classified in a subheading that specifies only LCD or LED as the medium.

This ruling is being issued under the provisions of Part 177 of the Customs Regulations (19 C.F.R. 177).

A copy of the ruling or the control number indicated above should be provided with the entry documents filed at the time this merchandise is imported. If you have any questions regarding the ruling, contact National Import Specialist David Curran at 212–637–7049.

ROBERT B. SWIERUPSKI,
Director,
National Commodity Specialist Division.

Re: Organic Electro-Luminescent Display Module; Revocation of NY F82153.

DEAR MR. ROCK:

This is in response to your letter dated March 5, 2001, requesting reconsideration of New York Ruling Letter F82153, dated February 16, 2000, which was issued to you on behalf of Tohoku Pioneer of America, formerly Pioneer Speakers. NY F82153 dealt with the classification of organic electro-luminescent (OEL) display modules under the Harmonized Tariff Schedule of the United States ("HTSUS"). In F82153, the OEL display modules were classified under subheading 8531.80.9025, HTSUS, which provides for other electric sound or visual signaling apparatus, other apparatus, other, indicator panels, other.

As explained below, we now believe this classification to be incorrect. This ruling sets forth the correct classification.

Facts:

The OEL display module consists of a 96 x 32 pixel graphic dot matrix, electro-luminescent display that has been attached to a printed circuit assembly ("PCA"). The PCA includes anode and cathode drivers, mylar "dome pad" depression switches, and a flexible connector. This module will be incorporated into a cellular mobile phone and will provide touch pad display of all relevant call data.

Issue:

What is the proper classification of the organic electro-luminescent display modules?

Law and Analysis:

Classification under the HTSUS is made in accordance with the General Rules of Interpretation ("GRIs"). GRI 1 provides that the classification of goods shall be determined according to the terms of the headings of the tariff schedule and any relative Section or Chapter Notes. In the event that the goods cannot be classified solely on the basis of GRI 1, and if the headings and legal notes do not otherwise require, the remaining GRIs may then be applied.

The Harmonized Commodity Description and Coding System Explanatory Notes ("ENs") constitute the official interpretation of the Harmonized System at the international level. While neither legally binding nor dispositive, the ENs provide a commentary on the scope of each heading of the HTSUS and are generally indicative of the proper interpretation of these headings. See T.D. 89–80.

The HTSUS provisions under consideration are as follows:

8592	Parts suitable for use solely or principally with the apparatus of headings 8525 to 8528:
8592.90	Other:
	Other:
8529.90.99	Other.
8531	Electric sound or visual signaling apparatus (for example, bells, sirens, indicator panels, burglar or fire alarms), other than those of heading 8512 or 8530; parts thereof:
8531.80	Other apparatus:
8531.80.90	Other:
	Indicator panels:
8531.80.9025	Other.

To determine whether or not an article is a "part," we must ascertain if that article is necessary to the completion of the article with which it is used, that is, if it is an integral constituent or component part without which the parent article cannot function as that article. *Clipper Belt Lacer Co., Inc. v. United States*, 738 F.Supp. 528 (CIT 1990).

Section XVI, note 2, HTSUS, provides, in pertinent part, as follows:

> (a) * * *.
>
> (b) Other parts, if suitable for use solely or principally with a particular kind of machine, or with a number of machines of the same heading (including a machine of heading 8479 or 8543) are to be classified with the machines of that kind or in heading 8409, 8431, 8448, 8466, 8473, 8503, 8522, 8529 or 8538 as appropriate * * *.
>
> (c) * * *.

You have provided documentation that shows that in addition to the display itself, these modules contain anode and cathode drivers, mylar "dome pad" depression switches and a flexible connector which are critical components for the operation of a cellular telephone. With these components, the module is beyond the scope of visual signaling apparatus of heading 8531, HTSUS.

These display modules are integral component parts without which cellular telephones, classifiable under heading 8525, HTSUS, that they are intended for could not function. Therefore, they are classifiable under subheading 8529.90.99, HTSUS. This ruling is consistent with a previous Headquarters Ruling on similar merchandise (See HQ 960873, dated November 12, 1997).

Holding:

For the reasons stated above, the electro-luminescent (OEL) display module is to be classified under subheading 8529.90.99, HTSUS, as: "Parts suitable for use solely or principally with the apparatus of headings 8525 to 8528: Other apparatus: Other: Other."

Effect on Other Rulings:

NY F82153 is revoked.

JOHN DURANT,
Director,
Commercial Rulings Division.
